

## Rules for Visits (Tours) by Minors to Controlled Areas at the NSLS (incl. SDL)

1. The specific visit must be reviewed and approved by the NSLS Safety Officer or Industrial Hygienist.
2. The visitors must be escorted by a person who is trained and badged (TLD) for access to controlled areas at the NSLS. The visitors do not require TLDs.
3. On the experimental floors, visitors should not approach the beamline front ends.
4. Designated "activation areas" may not be entered. These are the storage rings and the linac-booster enclosure.
5. Visitors must stay clear of activities which require eye or other protection, such as operating power tools, wet chemistry, liquid nitrogen transfer, or overhead rigging.
6. If a fill is required in the VUV ring, visitors must leave the VUV floor while the fill is in progress.
7. The escort should carry this memorandum so the operations staff can confirm that the visit has been approved by the NSLS Safety Officer.
8. ***The Visitor Log at entrance to Controlled Area must be filled in. Minor visitors are not required to sign the log.***

If there are questions about these rules or about hazards on the experimental floor, contact Andrew Ackerman, John Aloï or Nick Gmur.
